

Near and Far Ionization

Quiret S. (LAM) & de Barros S. (INAF-OABO)

Two possible source of reionization:

- Star forming galaxies
- AGN

IGM completely non-transparent for LyC photons at $z > 6$

Use indirect method to identify AGNs with LyC emission
Color evolution with $H\beta$ flux

$f_{\text{cov}} = 0$
 $f_{\text{cov}} = 1$
